

ABSTRACT

5

Antisense compounds, compositions and methods are provided for modulating the expression of insulin-like growth factor binding protein 5. The compositions comprise antisense compounds, particularly antisense oligonucleotides, targeted to nucleic acids encoding insulin-like growth factor binding protein 5. Methods of using these compounds for modulation of insulin-like growth factor binding protein 5 expression and for treatment of diseases associated with expression of insulin-like growth factor binding protein 5 are provided.

He was a man of great energy and a strong leader, and his influence was felt throughout the community.
